

Universal lick block for dairy COWS

A balanced diet is essential for optimal milk production and your cows' vitality. Roughage does not always provide all the essential minerals that cows need for bone development, muscle function, immunity, and fertility.

Salt is an important supplement for dairy cows to sustain milk production. It improves the electrolyte balance, helps improve feed intake and digestion and reduces deficiency symptoms like licking soil or wood. Our lick blocks contain, on a solid base of salt, many essential minerals and offer an easy way to supplement rations. The lick block helps prevent deficiencies and supports overall performance.

BENEFITS

- Provides essential minerals for healthy cattle and optimal performance
- A simple and effective way to supply essential salt and minerals
- Supports feed intake
- Supports key body functions
- Easy to use in barns or pasture
- Continuous, low-effort supplementation

PRODUCT FEATURES

- Contains salt and essential minerals
- Weight: 10 kg

WHEN TO USE THE LICK BLOCK?

The lick block can be used daily as a supplement to the standard ration.

HOW TO USE THE LICK BLOCK?

Cows regulate their own intake. By licking the block, they consume small amounts as needed.

- Place the block in an easily accessible place
- Recommended intake: 50 grams per cow per day
- Always ensure fresh drinking water is available

EACH FARM IS UNIQUE

Every farm has its own goals, challenges and raw materials. Koudijs Uganda ensures high quality feed solutions are available in shops across the country.
