

Turning day-old-chicks into top performers with Galdus

The first days of a chick's life are crucial for building a strong foundation for growth and profitability. By supporting early development, chicks grow in the most optimal and healthy way, forming the basis for high productivity. Prestarter feed is specifically formulated to meet the chicks' nutritional requirements during their first days.

GIVE YOUR CHICKS THE BEST POSSIBLE START WITH GALDUS

Galdus is a highly nutritious micro-pellet prestarter feed for young chicks, containing unique ingredients. The small size and softer texture of the pellet ensure a high feed intake, leading to early development and optimal growth. Galdus is developed in our own research facilities and is based on years of experience and insights gathered from around the world.

For optimal farm profitability, feed Galdus to broilers during days 1 to 7 and to layers during the first 10 days.

GALDUS HELPS YOU ACHIEVE THE FOLLOWING TARGETS:

- Early development of the digestive tract
- High feed intake and optimal growth
- Strong legs and immune development
- Increased flock uniformity
- Higher slaughter weight and increased egg production

WHY DOES INVESTING IN THE PRESTARTER PHASE LEAD TO HIGHER REVENUE?

The Koudijs feed concept is based on high efficiency. This means the feed must match the animal's needs as precisely as possible. The differences in nutritional needs in each growth phase are the reason for the prestarter, starter, grower and finisher feeds. By providing the right feed at the right time, growth potential, efficiency and overall profitability are optimised.

HOW TO USE GALDUS, PREMIUM FEED

Galdus can be offered without restriction during the first days of a chick's life. Ensure that fresh feed is supplied daily.

The general feeding guidelines are as follows:

- Broilers: a minimum of 175 grams per chick within 7 days
- Layers: a minimum of 100 grams per chick within 10 days

Your Koudijs Animal Nutrition specialist can advise you on the optimal quantity tailored to your specific situation.

OPTIMAL FARM MANAGEMENT

Feed is an important factor for healthy growth of your chicks. Besides providing the optimal amounts, management factors are important as well. Scan the QR code to watch the Farm-Up with Koudijs tutorial on optimal brooding management.

GALDUS: THE PREMIUM PRESTARTER FOR HEALTHY GROWING CHICKS AND OPTIMAL PERFORMANCE

HOW TO USE GALDUS EFFECTIVELY

- For best results, always start with Koudijs Galdus prestarter feed
- Feed guidelines:
 - Layers: minimum 100 grams/chick in 10 days
 - Broilers: minimum 175 grams/chick in 7 days
- Ensure that all chicks have access to sufficient feed and fresh water
- Provide fresh feed daily
- To avoid a drop in feed intake, ensure that the transition from prestarter to starter feed (and later transitions) is done gradually
